

## REMARKS

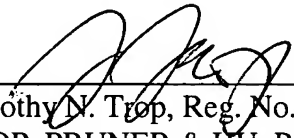

Claim 1 has been amended to specify that training symbols are sequentially sent from a first and second antennae. Each of the training symbols is sent in a packet that also includes information having a function other than training. Support for the limitations added can be found, for example, in Figure 9 and paragraph 55 of the present application.

The notion of the sequential transmission is nowhere suggested in the cited reference. In some embodiments, more accurate calibration and training results may be achieved when transmission occurs on an antenna-by-antenna basis.

Therefore, reconsideration is respectfully requested.

Respectfully submitted,

Date: July 8, 2008
